Verizon MPLS

Internet

Verizon MPLS

Internet circuits do not touch
Verizon MPLS network.

Site to site and site to cloud over
DIA circuits are at risk of inconsitent
internet routing.

Proposed

DIA

Layer II P2P

Internet

**Megaport
Backbone**

Diverse DIA will provide connectivity to in region
Megaport hubs. P2P connections are also an option.

Traffic will then route with consistent performance.
Both circuits are functional as links to private
backbone.

This design is more efficient as all links can tunnel
through Megaport hubs and reduces MPLS expenses
